Malaria BCC Indicator Reference Guide February 2014

Final Version

Continuous Distribution of LLINs for Malaria Control

Long-lasting insecticidal nets (LLINs) are one of the most important public health tools for the prevention and control of malaria. Ensuring universal coverage of nets in households in endemic areas is an important global priority.

This toolkit is a compilation of resources from recent experiences and research of LLIN continuous distribution systems. An array of potential mechanisms exist, including distributing nets through schools, community volunteers, or health facilities, and are discussed in detail in the guides and resources in this toolkit.

On June 16, 2011, a [consensus statement](#) was issued by the Roll Back Malaria (RBM) Vector Control Working Group (VCWG) Continuous Distribution Workstream, stating the importance of alternative distribution mechanisms to complement mass net distribution campaigns:

Care and Repair of Mosquito Nets Toolkit

 TOOLKIT SITEMAP

Care and Repair of Mosquito Nets Toolkit

This toolkit contains resources for program planners and NMCPs related to the care and repair of mosquito nets. It includes formative research tools, protocols, and reports; materials developed for BCC campaigns around care and repair, and tools and questionnaires for evaluating net care and repair behaviors.

What is net care and repair?

Net care and repair refers to actions that will maintain mosquito nets in good condition so they can be used

School-based distribution of Long-Lasting Insecticidal Nets

A short guide based on recent country
experience

Contents

Summary	1
Background	5
Why might school-based delivery be a good option?	6
When might school-based delivery be a good option?	7
How much does school-based LLIN delivery cost?	9
How to deliver LLINs through schools	10
Knowledge gaps and priorities for research	20
Annexes	22

Acknowledgements

This report is made possible by the generous support of the American people through the United States Agency for International Development (USAID) under the terms of USAID/JHU Cooperative Agreement No. GHS-A-00-09-00014-00. The contents are the responsibility of Kate Kolaczinski and do not necessarily reflect the views of USAID or the United States Government.

Interviews with people involved in the school-based LLIN distributions in Tanzania, Nigeria, Ghana and Senegal were carried out and we thank these people for the considerable time they allowed us to take up, as well as their frank and reflective thoughts. A full list of interviewees is given at the end of this document.

Hannah Koenker and Karen Kramer provided particularly useful comments on the initial draft.
