

Polio Mobile Money Implementation in Africa

WHO AFRO Digital Payments Strategy

GLOBAL CONTEXT

- As part of its mandate, WHO provides technical, operational and logistical support to help the government implement large-scale public health activities, including mass vaccination campaigns to prevent or respond to outbreaks of vaccine-preventable diseases (polio, yellow fever, measles, cholera, etc.). In this context, WHO transfers funds to the Ministry of Health to cover various categories of operational costs, including compensation for beneficiaries, rental of means of transport, fuel, rental of rooms, etc. mainly in cash.
- Recent developments in the international environment in terms of regulations related to the use of cash in humanitarian aid, the overall the operational challenges inherent in cash-based interventions require an evolution of the current model.
- The spread of COVID-19 and other health emergencies such as Ebola in the African region, highlights the urgency to implement contactless digital payment solutions and promote its use by health and community workers who, risking their lives, administer lifesaving vaccines and treatments to our communities.
- In addition, Sub-Saharan Africa occupies a dominant position in digital financial services and mobile money with 469 million accounts (nearly 50% of the global total) and 1.3 billion USD in daily transactions (i.e. 2/3 of the total). worldwide). The sector is experiencing very strong growth with 50 million accounts created in 2019, and a 27.5% growth in transaction amounts during the same period.
- Faced with this observation, the WHO regional office for Africa is committed to introducing the use of digital payments as a specific area of its operational support to the 47 countries in the region. The overall goal is to leverage sub-Saharan Africa's comparative advantage in mobile money to address the challenges listed above. In this context, a letter was sent in 2020 by the Regional Director of WHO to the 47 Ministers of Health of the Africa region to inform them of this initiative.

WHO AFRO is transitioning to digital payment starting with the polio eradication program

With the current cVDPV2 pandemic and its velocity to spread, the WHO is promoting and transitioning to the use of digital payment systems for health interventions across regions. In line with the WHO global strategy on digital health, WHO AFRO in 2020 initiated efforts to digitize payments for polio campaign workers beginning implementation in 14 priority countries.

Polio outbreak response campaigns in the past have been delayed or poorly implemented across African countries due to challenges with sending complete funds to frontline beneficiaries like vaccinators and supervisors implementing campaigns on time.

This posed a threat to the overall Polio eradication effort and thus necessitated implementation of targeted solutions to address identified gaps

WHO AFRO identified specific issues with the payment of campaign workers...

- **Delayed disbursement of funds** to operational levels, resulting from challenges with bank transfer or cash out at local banks
- **Lack of transparency** resulting in leakages and inefficiencies
- **Numerous layers of funds transfer** resulting in bureaucracy and duplicate processes
- These issues led to **demotivated campaign workers and difficulty in hiring and retaining** good campaign workers

... and used these issues to guide the development of a solution with clear objectives

- **Design and implement a digital payment system** to reduce lag time and ensure timely payment of funds to polio campaign frontline workers
- Ensure **direct payment of campaign workers** with little to no leakage of funds
- Build **evidence through research and document processes** to be scaled up to other countries, and other public health interventions

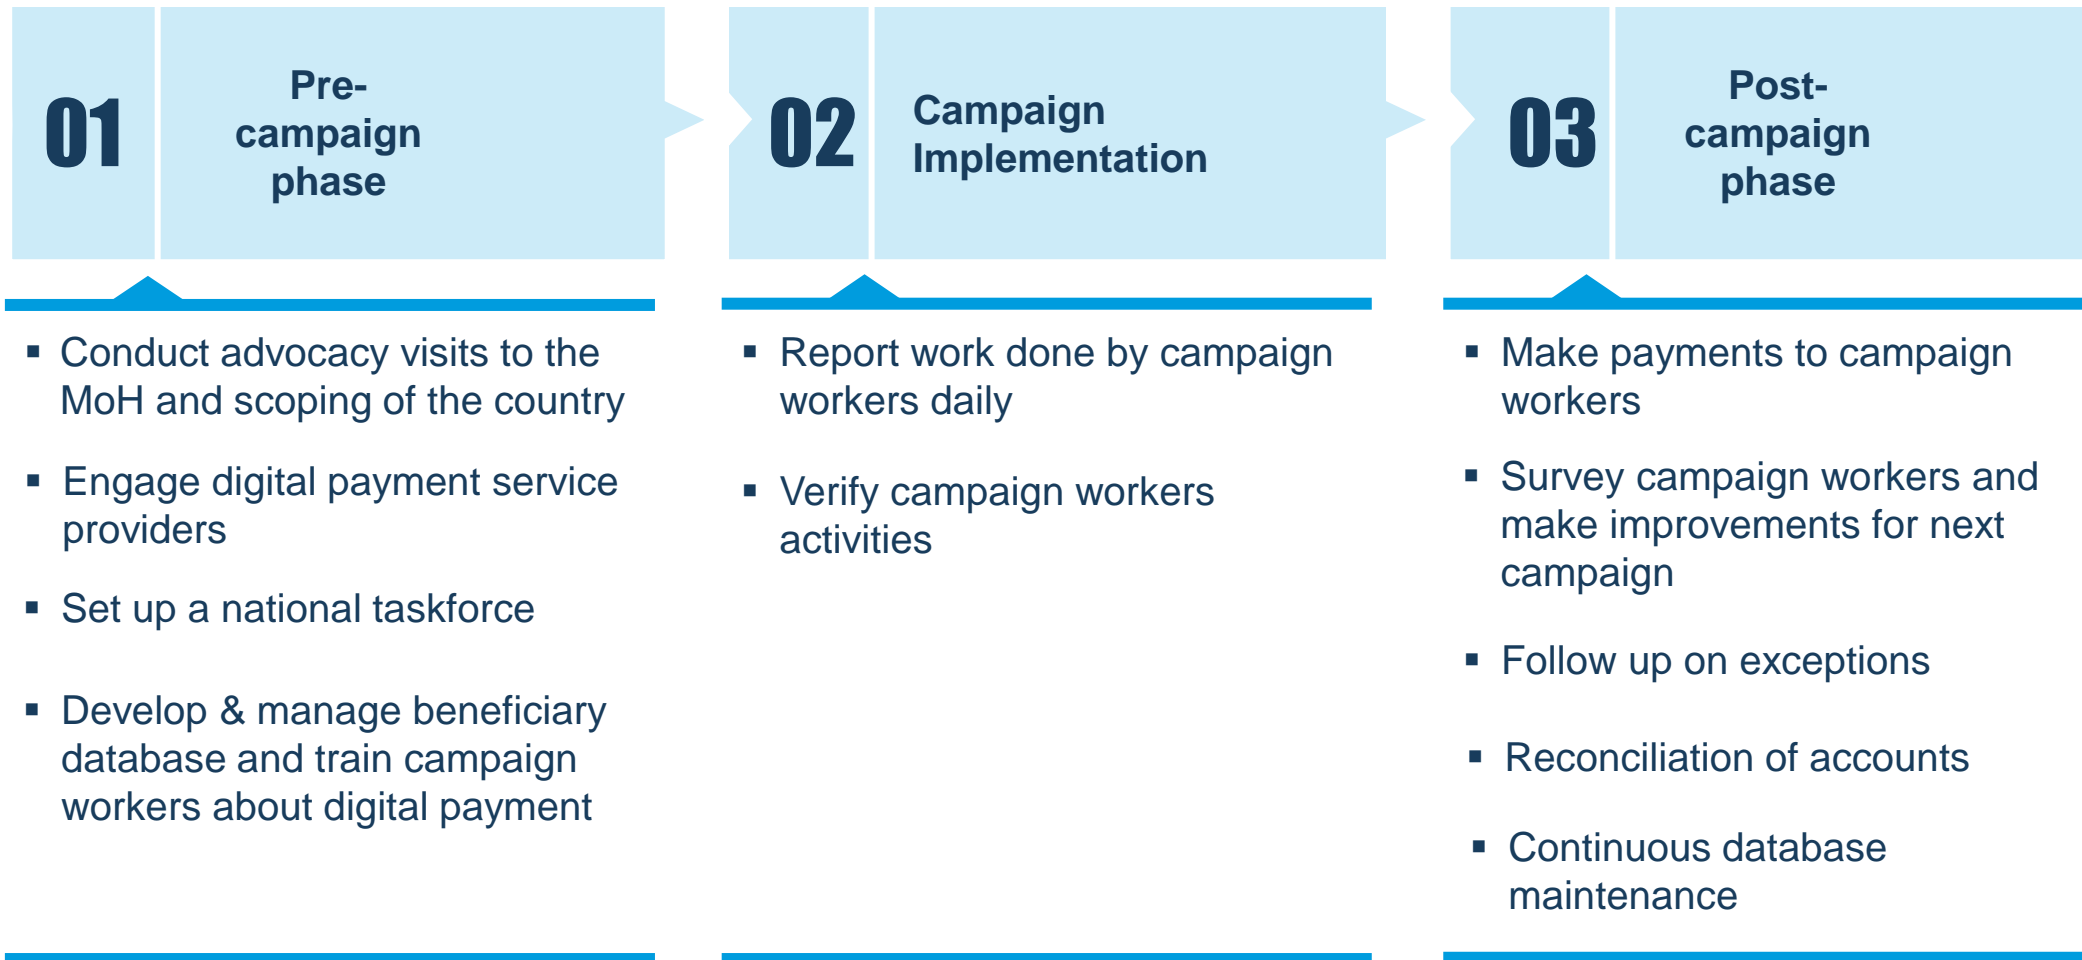

Though the WHO currently implements the Direct Disbursement Mechanism, a more agile approach that makes payments rapidly, in full and conveniently is required to meet the goal of a rapid response to outbreaks in the countries.

WHO AFRO digital finance team designed a system with clear components to guide implementation in the demonstration countries

The digital payment system was implemented in three phases in the demonstration countries

Source: WHO AFRO

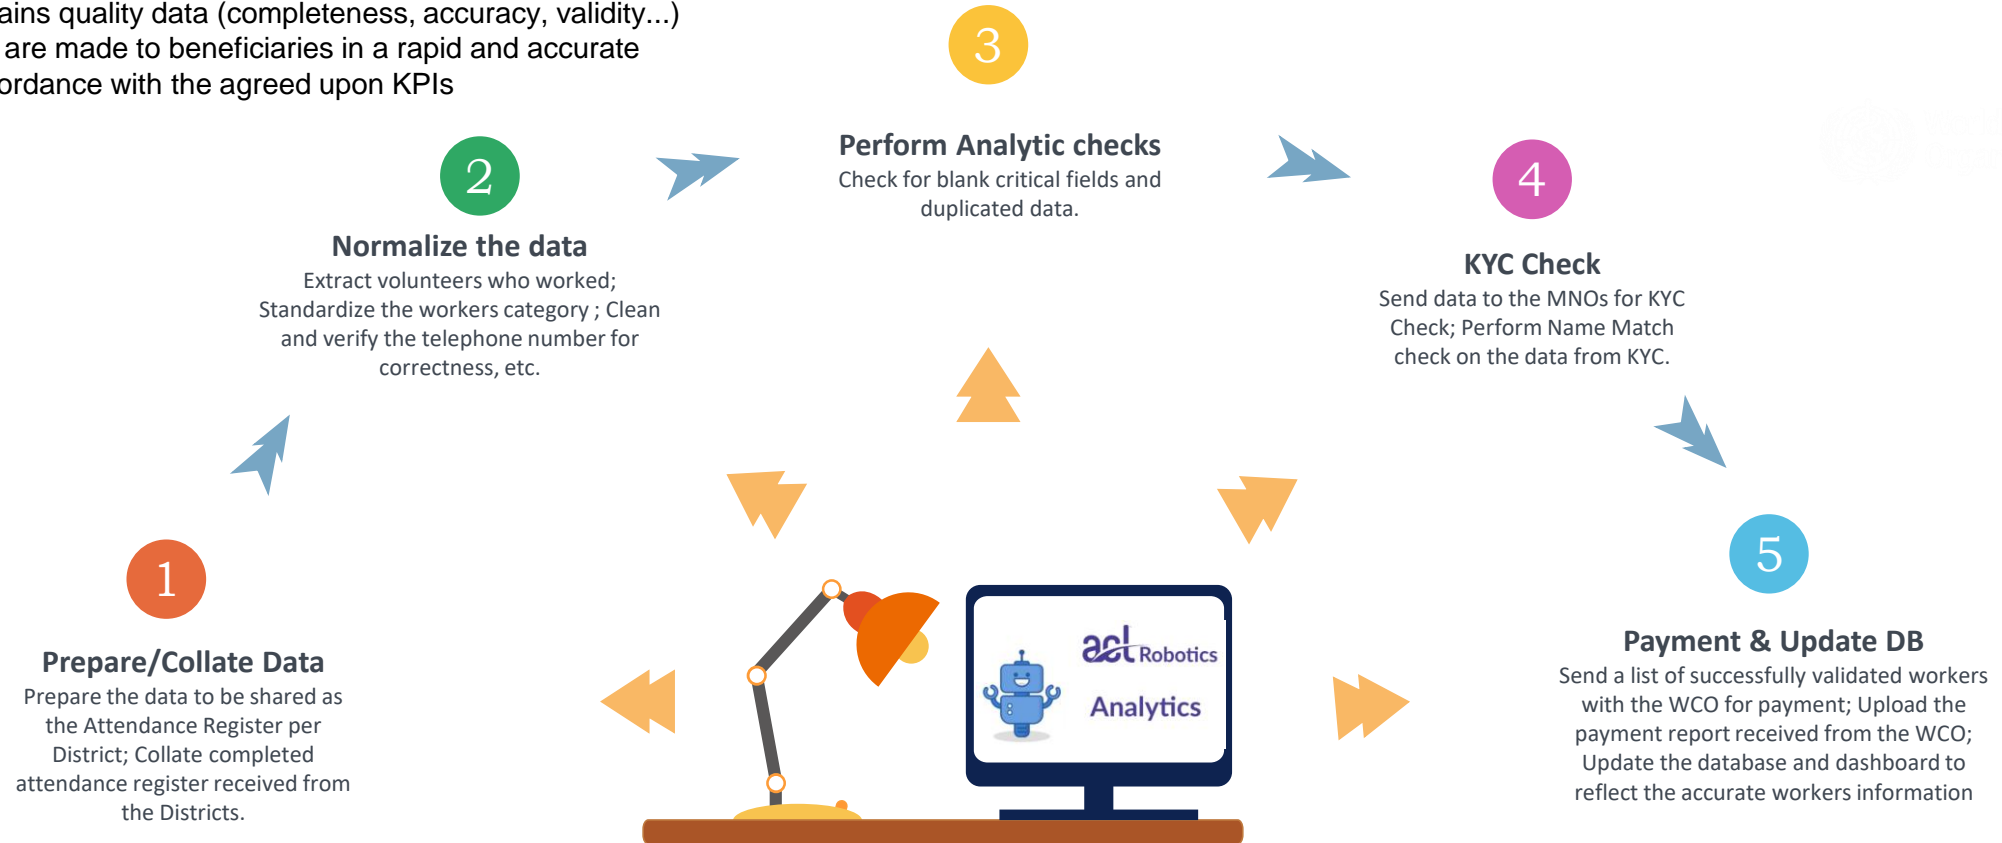

WHO AFRO has officially signed 34 contracts with MNOs across 15 countries

COUNTRY	MNO
Burkina Faso	Orange Money, Moov & Yup
Cameroon	MTN & Orange
Ghana	MTN & Vodafone
Liberia	MTN & Orange
Democratic Republic of Congo	Airtel, Vodacom & Orange
Sierra Leone	Africell & Orange
Mali	Orange & Wizall
Gambia	Africell & Qcell
Cote d'Ivoire	MTN & Orange
South Sudan	LEM, Ecobank & Alphabank
Malawi	Airtel & TNM
Republique of Congo	MTN & Airtel
Tanzania	Vodacom & Tigo
Madagascar	Airtel, Mvola & Orange
Botswana	Mascom & Orange

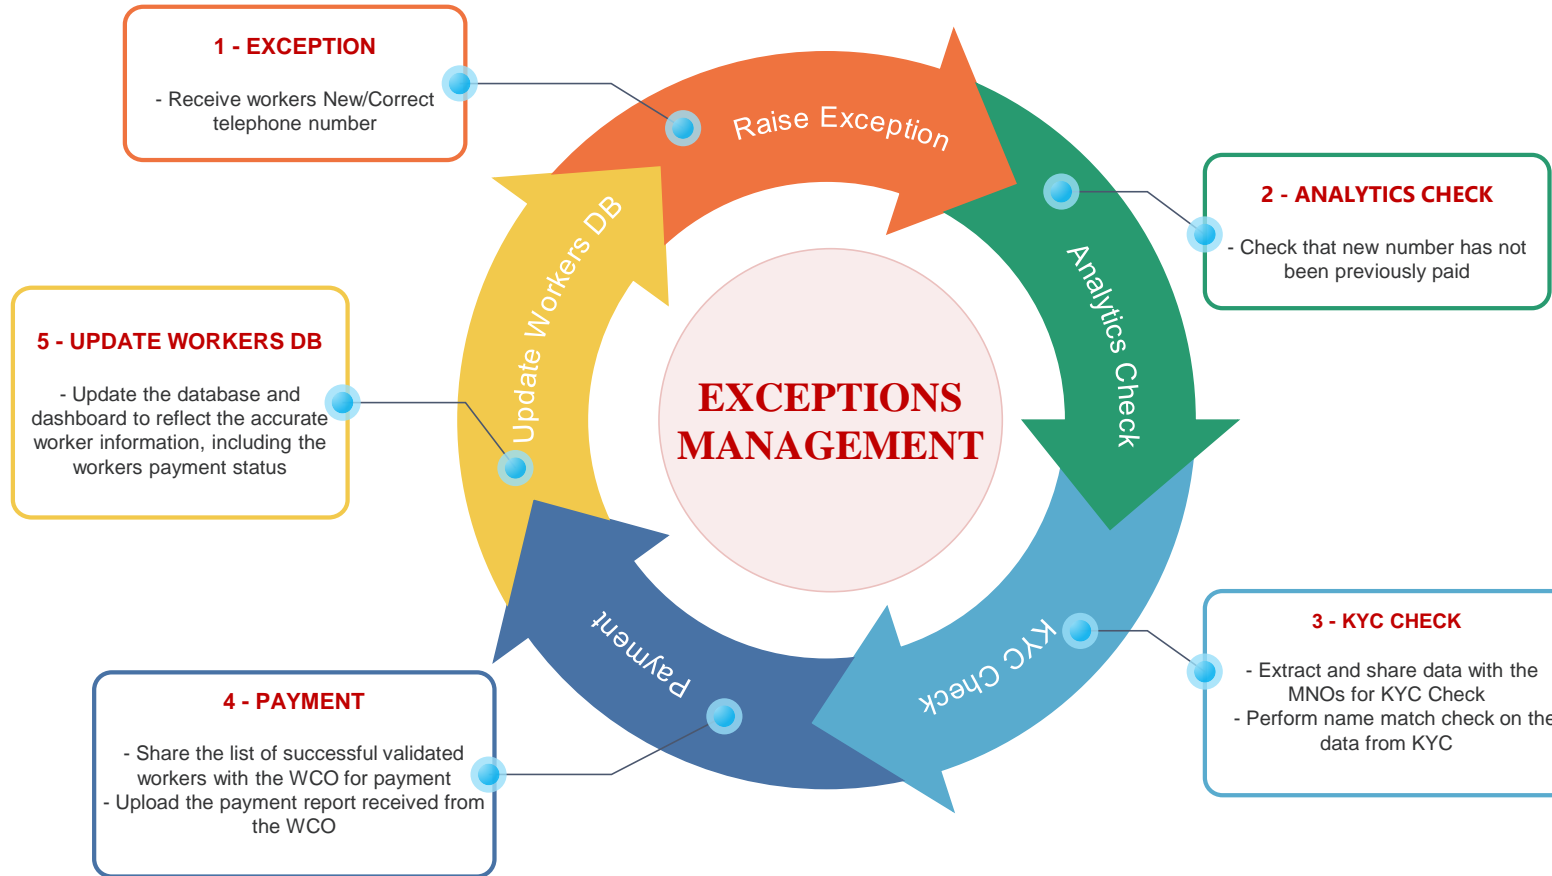

ACL Robotics tool was used in to manage the payment process

Key Objective:

Provide data analytics services to WCOs within the context of the health workers payments digitization project to ensure that the database contains quality data (completeness, accuracy, validity...) and payments are made to beneficiaries in a rapid and accurate manner in accordance with the agreed upon KPIs

Exceptions Management Process

Power BI interfaces developed to manage and track the data collection and payment process

Current State of Digital Payments in AFRO (1/2)

- Over **one million workers** have been registered and **+ 577,000 workers paid** via mobile money during polio campaigns since project launched in September 2020.
- Project has been deployed in **18 countries** with payments executed via mobile money in **14 countries** (Côte d'Ivoire, Mali, Ghana, The Gambia, Liberia, Sierra Leone, Congo, South Sudan, Malawi, DRC, Botswana, Zambia, Nigeria and Tanzania).
- Implementation currently ongoing in **7 countries** (Zimbabwe, Togo, Burkina Faso, Madagascar, Benin, Rwanda and Burundi).

Current State of Digital Payments in AFRO (2/2)

- Database created & Payments have been made (13)
- Database created; awaiting campaign (4)
- On going implementation (9)
- Implementation not started
- Non-Afro countries

#	Countries	Database Size	Beneficiaries Paid via Mobile Money	Impl. Scope	Time to pay 90% of workers

Campaign workers accepted Mobile Money and shared their experiences

With the support of 60 Decibels, WHO AFRO surveyed workers post campaign to assess the impact the switch to digital payments had on worker satisfaction....

1,450 +

Vaccinators interviewed in:

 [Cote d'Ivoire](#)

 [Liberia](#)

 [Congo](#)

Key Takeaways

- Vaccinators see value in how secure this mode of payment is, and how easy and convenient it is to cash out payment
- Payment timelines are seen as improving over time- with payments taking lesser time in round 2 than in round 1
- Setting their expectations right by improving communication around payment timelines, amount and composition of payments can improve payment experience

Preferred mode of payment

"I found the payment to be quick with mobile money compared to the other campaigns before"

15/05/2023

"I got the notification that the money was in my account, and I got it without any problem."

"Mobile money helps me keep the money safe and away from temptation of using it when not necessary."

12

There were key lessons to learn from implementing Mobile Money in focus countries

- **Engaging the government early on in the project was a good idea.** The Digital Finance Team began advocacy with the Ministry of Health in Cote d'Ivoire and the Democratic Republic of Congo from the design of the database. This encouraged ownership of Mobile Money implementation.

- **Government approvals must be gotten way before implementation.** In Mali, the Commcare app could not be used for campaign workers registration due to data privacy restrictions to store citizens data outside the country

- **Identification and engagement of Mobile Network Operators should be done early on** during the pre-campaign phase of implementation. In Cote d'Ivoire, there was a need to review the Service-level Agreement with Orange to capture confidentiality of data.

- **The use of Mobile Money enabled timely payments.** For example, in Cote d'Ivoire 60% of beneficiaries received payment on the last day of campaigns in round 3

- It is important **build staff capacity, explore approaches for simplifying CommCare or identify alternative capacities** at the subnational level that can work with supervisors to report attendance using CommCare for sustainability purposes

- **Documentation of processes, lessons learned and effectiveness of digital payments is critical to its expansion.** Experiences in Cote d'Ivoire guided implementation in Congo and DRC. A learning agenda will be developed to inform the design and implementation of similar interventions, and provide evidence for advocacy to decision makers

- Mobile Money showed other potential ways it could be used to **strengthen health systems like digitizing the workforce and financial reporting**, thereby reducing the chances of ghost workers, and leakages of funds

Thank You.
