

# Stratification and sub-national tailoring for ITNs: Results of applying the methods in Ghana

Otubea Owusu Akrofi

2024 AMP Annual Partners Meeting  
Nairobi, Kenya  
February 2024

# Outline

- **Malaria Burden**
- **Malaria Vector Control in Ghana**
- **Stratification**
- **Results of Stratification**
- **Way forward/Conclusion**

# Malaria Burden (1/3)

- In 2022, there were an estimated 249 million cases of malaria worldwide with 608 000 deaths
- The WHO African Region carries a disproportionately high share of the global malaria burden accounting for 94% of all malaria cases and 95% death (WHO 2022)
- Children aged under 5 years accounted for 76% of malaria deaths in African region (WHO 2023)

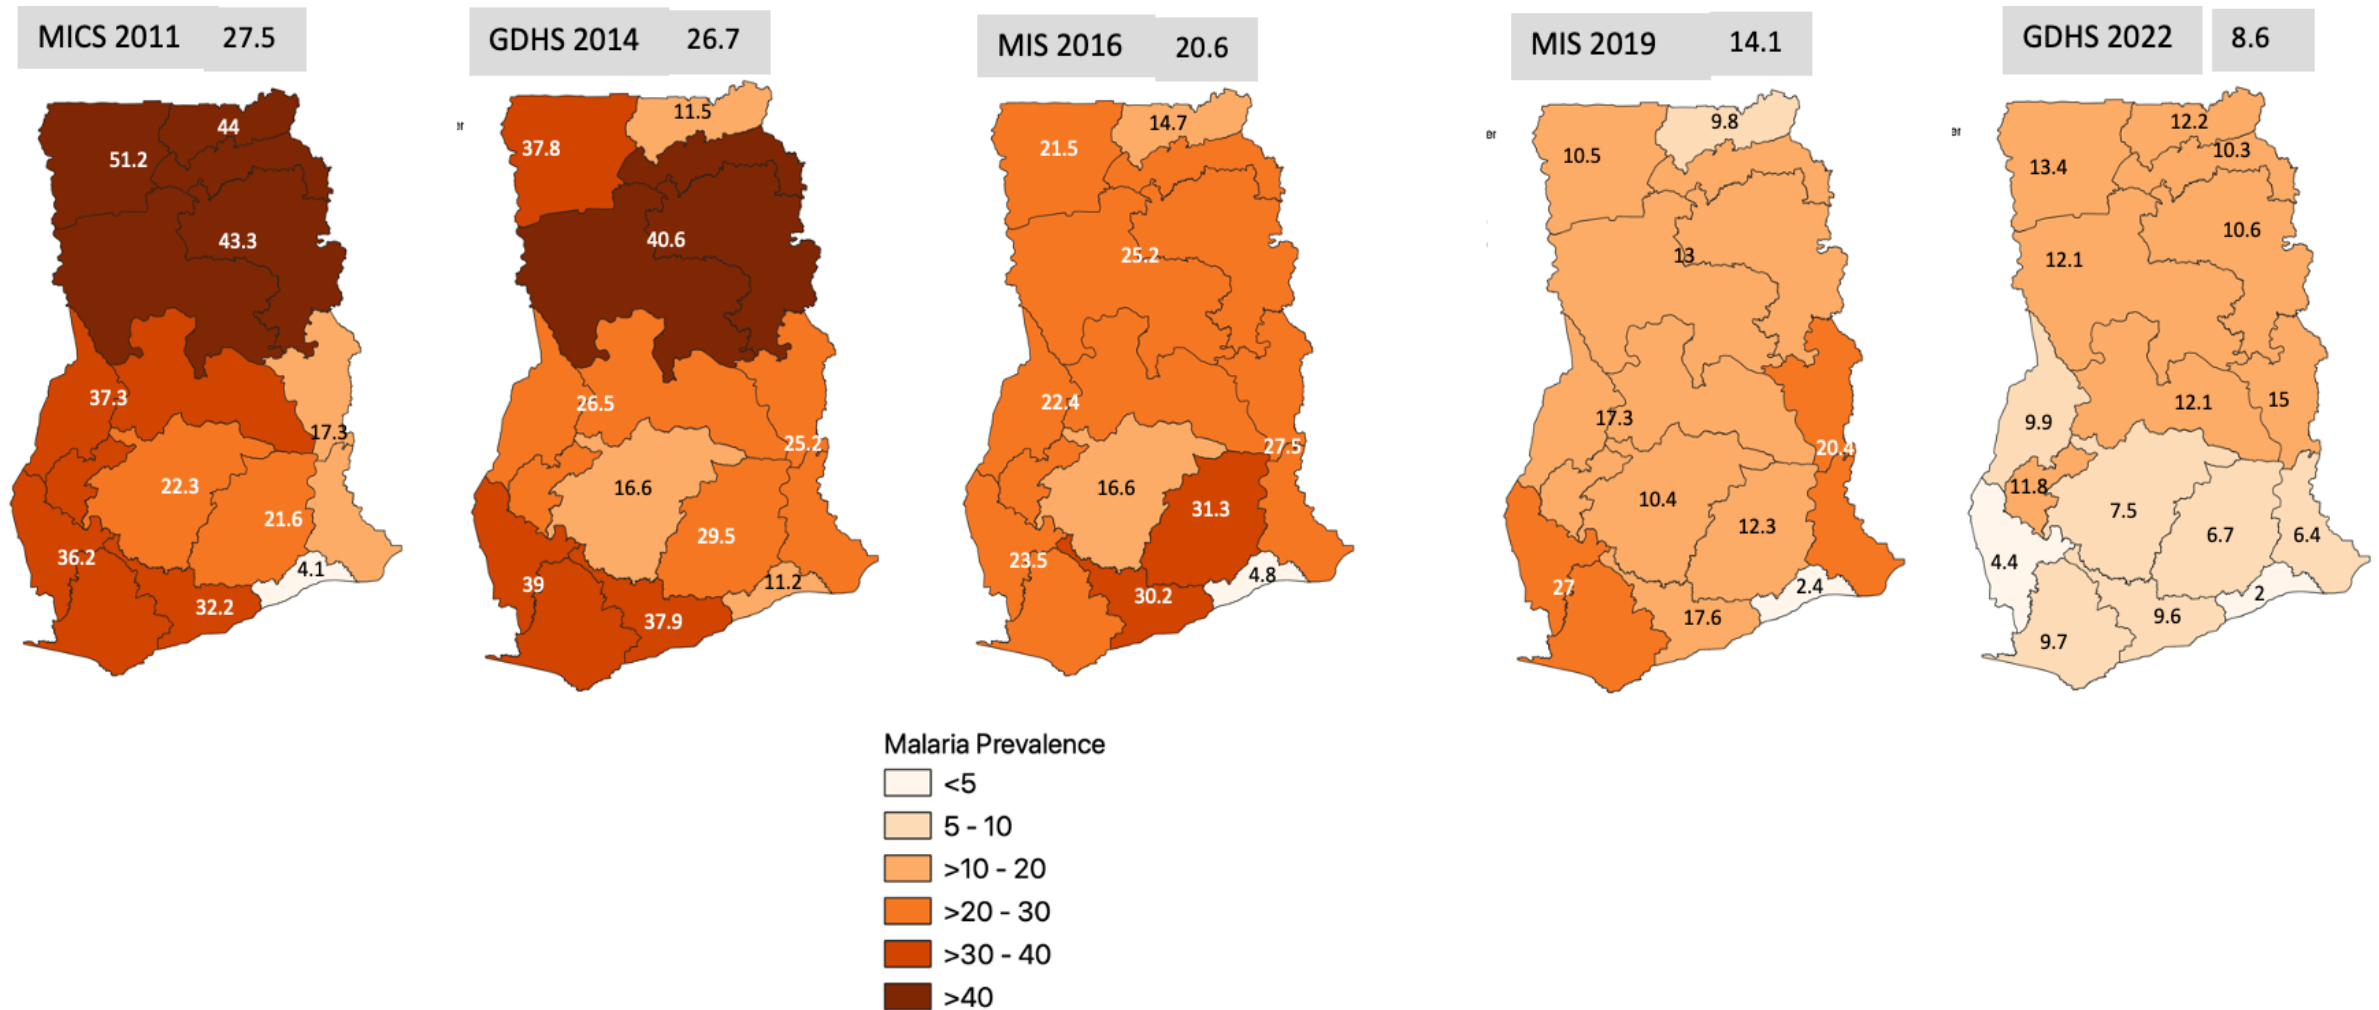

# Malaria Burden (2/3)

- ❑ Ghana is a malaria endemic country (one of the 11 HBHI countries)
  - Entire population of 30.8 million (2021 census data) is at risk of malaria
  - Under-five mortality rate: 52/1,000 live births (2017 MHS)
  - Parasite Prevalence – 8.6% (GDHS 2022)
  - 0.4 % of in-patients deaths
  
- ❑ Three ecological zones with varied malaria transmission pattern

# Malaria Burden (2/3)

- Economic cost
  - Highest disease expenditure- NHIS
  - GDP reduction by 0.25 - 6%
  
- Major vector species:  
*An. gambiae*, *An. funestus*, *An. arabiensis* & *An stephensi*
  
- Major Plasmodium species: *Plasmodium falciparum* - 96.3%; *P. malariae* – 1.6%; *P. ovale* – 1.0%

# Results from surveys - Malaria parasite prevalence

Percentage of children age 6-59 months who tested positive for malaria by microscopy by region, 2011-2022; Source: GDHS/MIS

# Malaria Vector Control Interventions in Ghana

**ITN  
Distribution**

**Indoor  
Residual  
Spraying  
(IRS)**

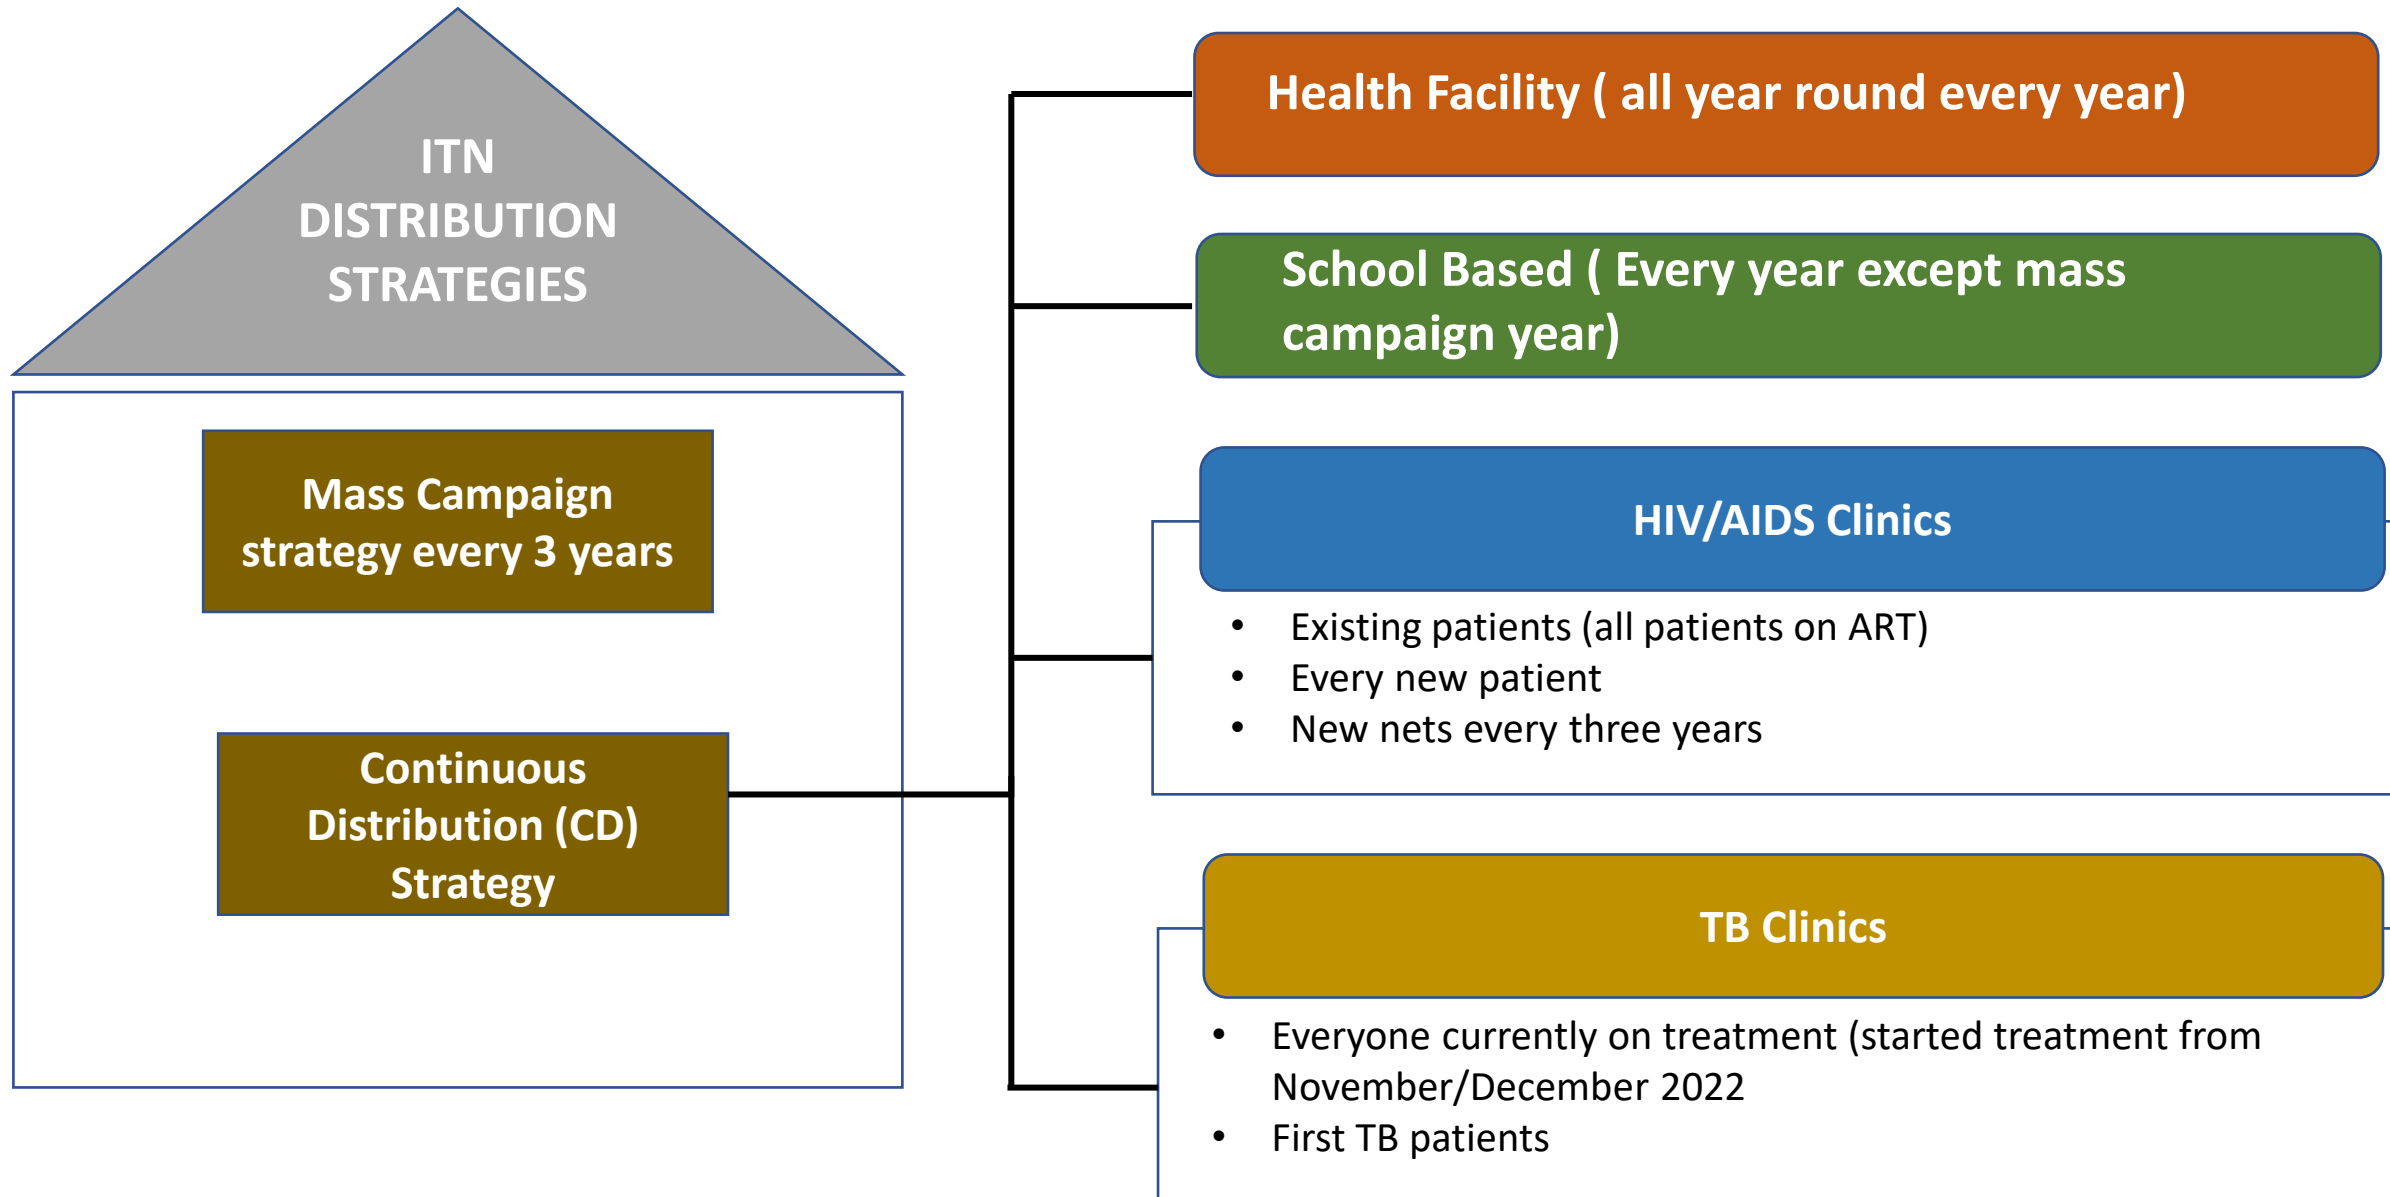

**Targeted  
Larval Source  
Management  
(LSM)**

**Entomological  
Surveillance**

# ITN Distribution

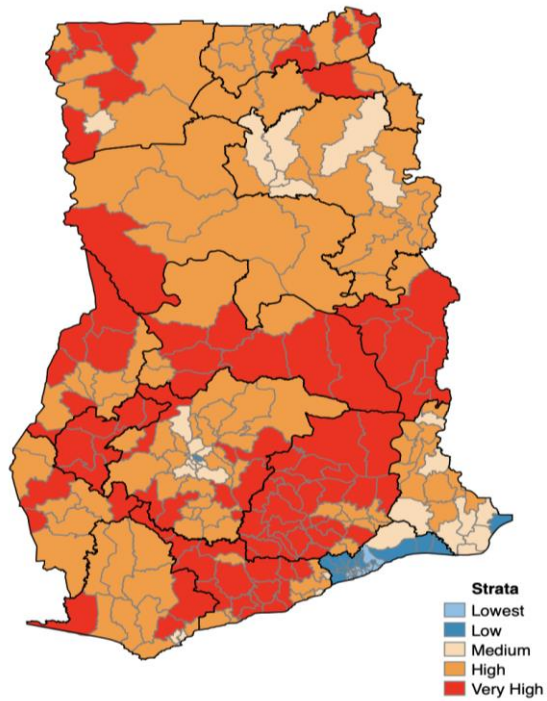

# Stratification exercise (1/6)

- Strategic information is used for decision making of Vector Control interventions in Ghana
- This involves implementation of appropriate, entomological context-specific interventions, to maximize impact.
- This focuses on ensuring systems are in place to obtain the requisite data set to enable decision on the available tools, appropriate for a particular district
  - Stratification exercise
  - Epidemiology data on disease burden
  - Entomology and Insecticide resistance data
- Choosing the appropriate intervention amidst limited options
  - Where to put which tool is based on intensity of disease
  - Not to put two main interventions in place

# Stratification exercise (2/6)

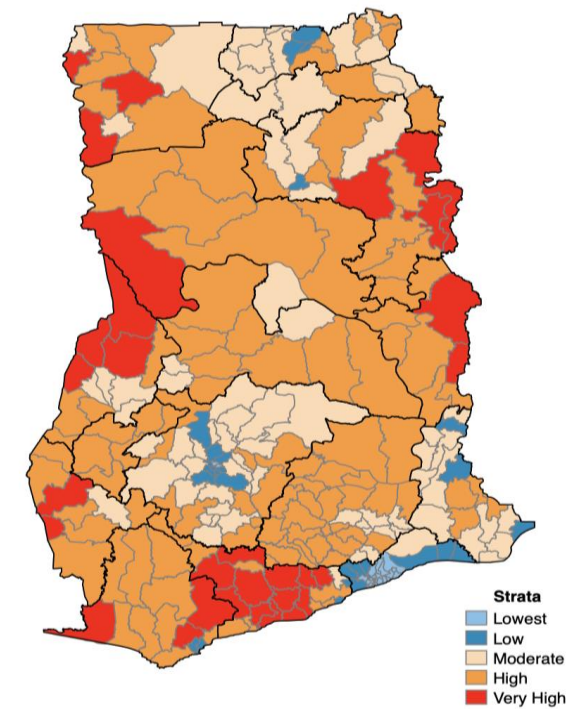

First level stratification  
Prevalence + Adj Inc, 2022

Under-five All-cause Mortality Rate,  
2017

Final stratification  
Prevalence + Adj Inc + U5MR, 2022

# Stratification exercise (4/6)

- The following considerations are made for subnational tailoring of the types of ITNs:
  - Burden of disease per district
    - Stratification exercise
    - Surveys
      - Ghana Demographic Health Survey (GDHS)
      - Malaria Indicator Cluster Survey (MICS)
  - Change in burden between previous and current stratification
  - Rural/urban
  - Type of ITN received in previous exercise
  - Quantities available to the country/cost

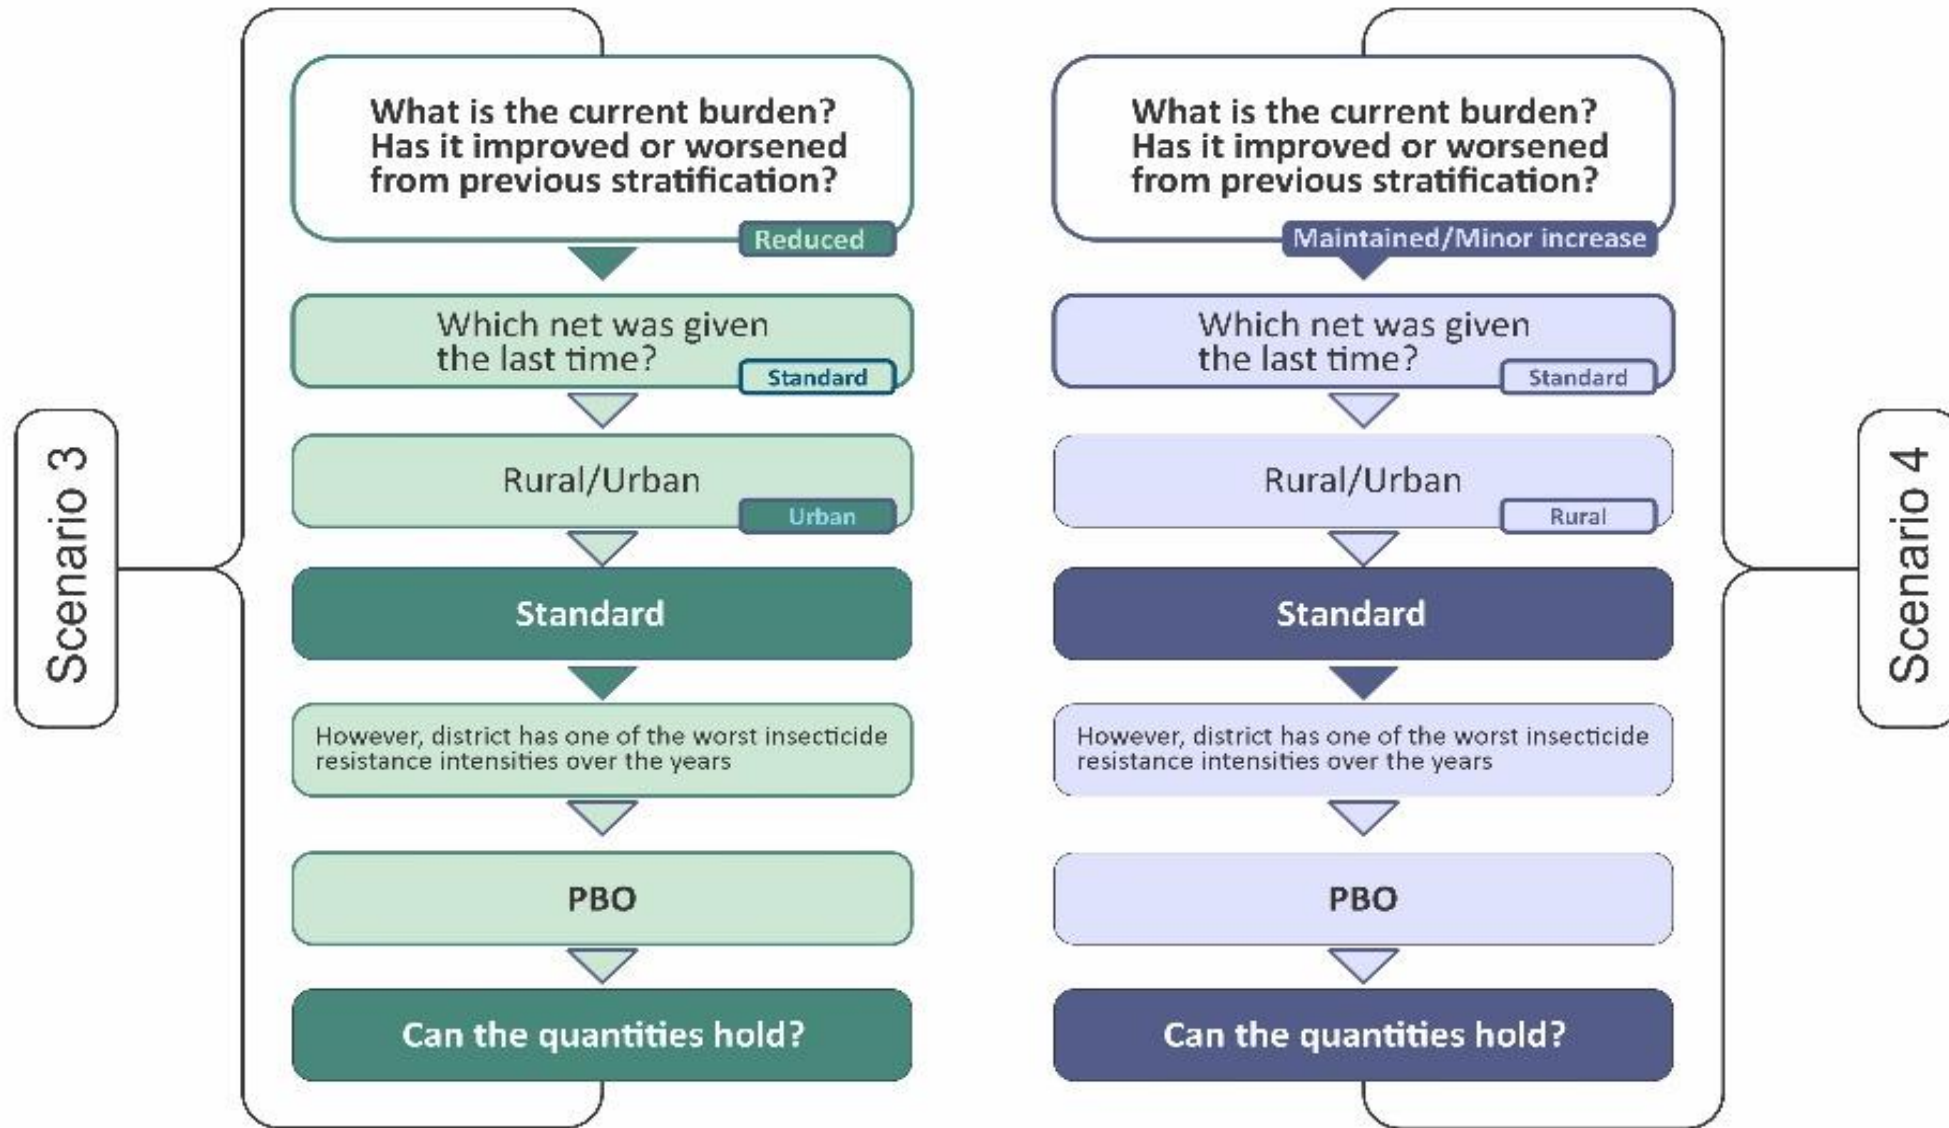

ITNs Available		
Standard Pyrethroid	Pyrethroid PBO	'New Nets'

# Stratification exercise (5/6)

# Stratification exercise (6/6)

ITN type for 2021 Mass Campaign

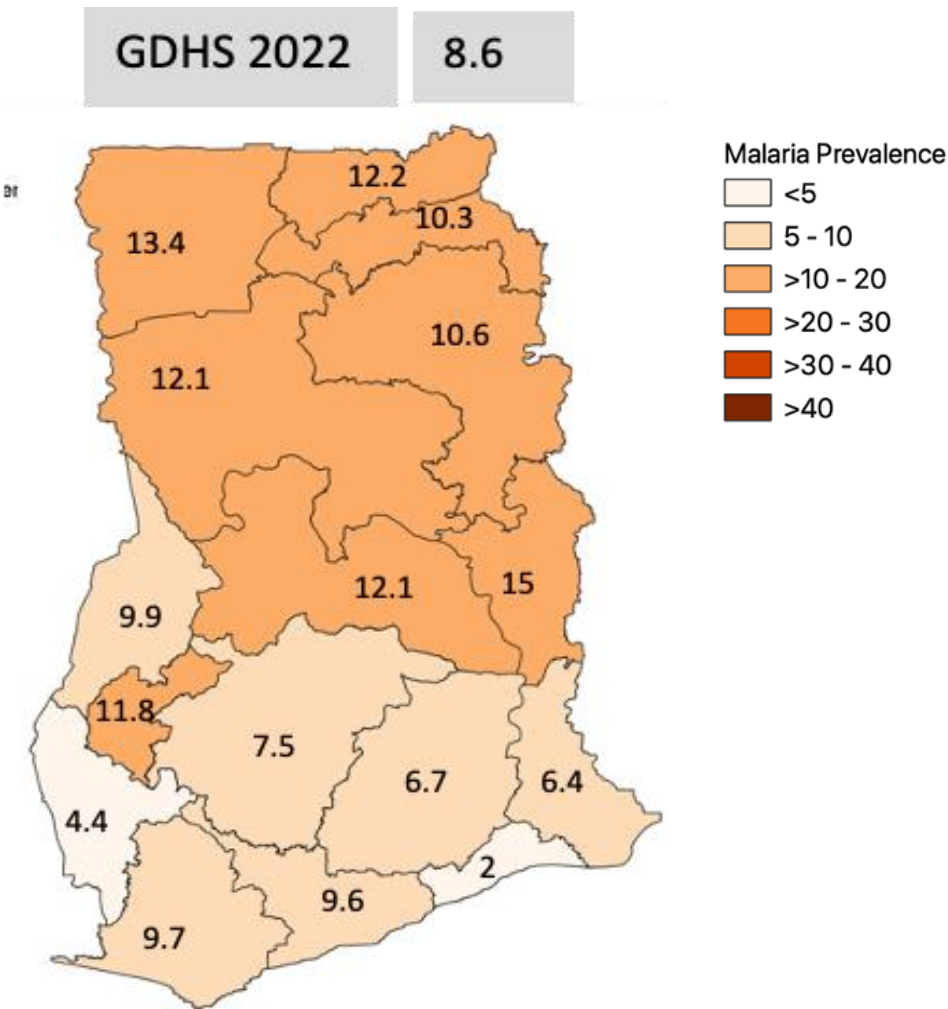

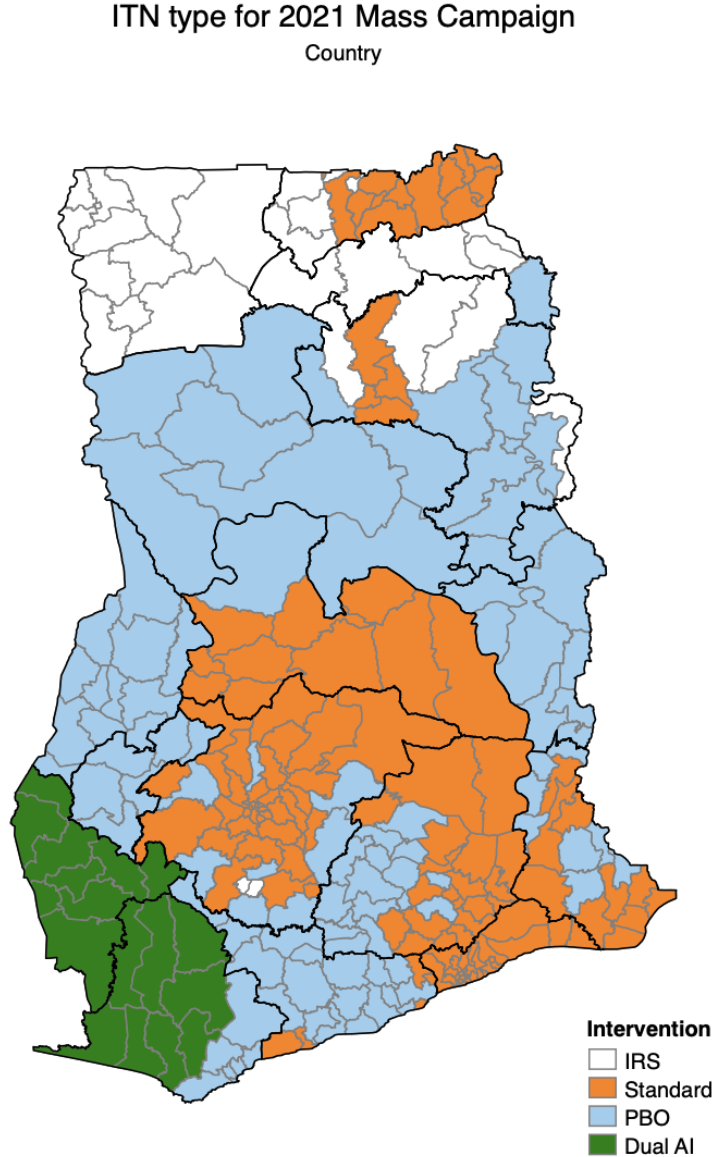

Country

ITN type for 2024 Mass Campaign

# Results - 2021 ITN Mass Campaign

Percentage of children age 6-59 months who tested positive for malaria by microscopy by region, 2011-2022; Source: GDHS/MIS

# Conclusion

- The country has made remarkable progress in decisions concerning the kind of ITNs
  - Active approach to resistance issues
  - Not a one size fit all approach to net placement
- In spite of the fact that this can be a logistics nightmare, the country is able to go round this with early planning and dutiful human resource
- The country looks forward to in addition to this achievement,
  - being able to actively decide on the type of net material that is procured – will result in commensurate usage coverages
  - Eventually have susceptibility increased in areas of high resistance
